

OVERVIEW ▶ ▶ ▶

As with every insurer, you are seeking improved speed to market for new and different products. You face increasing requirements for compliance with regulatory issues as they grow every year, while at the same time TCO is still something you need to keep down.

These challenges have a direct impact on your IT department. You need to come up with a solution flexible enough to provide value to your business strategy.

SISTRAN has created SISE, a suite of insurance software solutions that can help you track your company's business strategy in this challenging insurance landscape.

SISE®

SISE is the result of almost 30 years of experience in the insurance industry with over 150 successful customer implementations.

Based on Service Oriented Architecture (SOA), SISE allows easy integration with other systems.

The availability of SOA is now common among insurance software solutions, though in many cases SOA is being provided as part of a “wrap” approach to extend the useful life of a system, and not as part of the core code as SISE does.

Of particular note are product development and straight through processing capabilities (STP), as well as the integrated workflow capabilities which allow your company to innovate, adapt and react fast while keeping your costs low and your efficiency high.

SPEED TO MARKET

Through SISE Insurance Product Designer, it is easy to define how each product operates and what business logic has to be applied. With SISE Business Rules Engine and Scripts, you can forget about application codes, and additionally the ability to reuse product definitions makes it easier than ever to come up with a new product or enhance existing ones.

SISE supports external rating solutions as well as its own rating engine.

The flexibility SISE provides helps you to improve business but it also makes it easier to become compliant with regulatory issues.

COST REDUCTION

Providing efficiency along the value chain is one of the unique selling points of SISE.

SISE provides a true web interface and straight-through processing capabilities (STP) that automate the end-to-end processing of policies and endorsements.

SISE provides features that provide agents on line system access and automated underwriting which greatly reduces the cost of policy processing. Mobile features are also available for agents who are on the move.

Reduced development time and maintenance, plus STP capabilities and the ease of integration to third parties using SOA, provides a lower cost base with which to achieve your business goals.

The aim is not to just do it cheaper, but also faster. With SISE you achieve both.

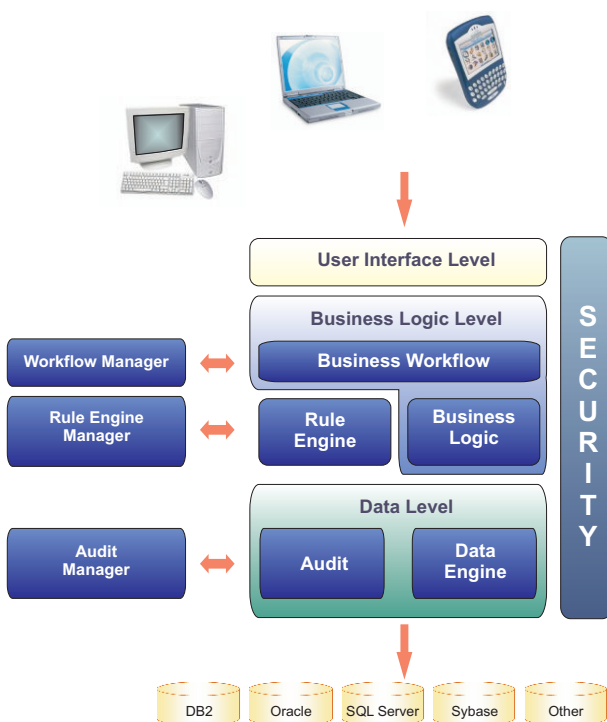

SISE SOLUTIONS

SISE suite of insurance solutions include the following systems:

- **Fast and Full Quote**
- **Issue and In Force Administration**
- **Insurance Portal Solution (b2b & b2c)**
- **Mobile Quote and Issue**
- **Insurance Product Designer**
 - **Business Rules Engine**
 - **Rating Engine**
 - **Scripts**
- **Business Workflow**
- **Integration BUS**

ARCHITECTURE:

SISE uses a completely modern technology stack and is available in .NET.

INFRASTRUCTURE

SISE n-tier architecture, offered in conjunction with a completely modern code base (.NET), also provides you with platform flexibility.

Customers are able to run the system on a variety of databases, operating systems, and application servers. SISE supports Windows; Unix; Linux; Solaris; OS 400. Major vendors including DB2; Oracle; SQL Server and Sybase are supported.

Finally, you can choose any hardware platform that supports the aforementioned operating systems and databases.

If you still can't find the one of your choice, please contact us.

ABOUT SISTRAN
