SISTRAN and Hyland join their efforts to offer a complete solution for the Latin American insurance market aiming to help insurance companies in the development and management of their business information. Integration between OnBase and SISE platforms speeds up software deployments at lower costs in order to increase insurance companies' efficiency and offering better results.

Hyland OnBase, a leader solution in business data management (ECM), combines document management, records administration and process automation in a single platform. With OnBase, insurance organizations efficiently manage every kind of contents: from scanned documents, faxes, print spoolers, application forms and electronic files to network contents, multimedia files, e-mails and other industry-related documents.

OnBase is a unique platform that covers -among other processes- infeed tables, subscriptions and new business, loss processing and complaint management. A single product captures documents, automatizes processes, generates work flows and shares files in a safe manner.

IBM Watson is an Artificial Intelligence computer system capable of answering questions in natural language. It is based on cognitive computing, capable of processing information, learning, reasoning, memorizing, solving problems and taking decisions.

All systems are able to process a huge quantity of information; however, only the "artificial intelligence" has the capacity to "learn" while processing it. This is "intelligent analytics" or "cognitive analytics"-

Neolinks is a loss inspection video tool. It drastically improves inspectors' efficiency as they do not need to go to the inspection place.

Our worldwide alliance program develops and maintains strategic business relations with other technology companies.

Scope Technologies provides integral innovative solutions for Payment for Use or Payment as I Drive. It enables insurance providers, fleet operators and post-sale service providers to be innovative and successful in dynamic market conditions.

PPS is a digital tool that allows insurance companies channeling payments with important differences regarding currently available options. It groups payment methods in a single system; it is easy to integrate and it is exclusively designed for the insurance market.

AddAction is a Unique and Unified Database Model for recording all interactions with customers at the different stages of products and/or services of the Life Cycle, through all contact channels, and independently from any software product already installed.

ARPLATIA KMA offers software solution to Insurance Companies with the purpose of reducing costs and fraud in loss and repairs management as well as dead-times for vehicles at car repair shops.

Management of repairs and damage claims permit focusing on the business core with a maximum effort.

A sole valid partner centralizes administration, communications and repairs' invoicing, thus saving time and resources of the insurance company.

Worldsys is a leader company in regulatory compliance, assets laundering prevention and solutions for financial entities. It is possible to work only with lists verifications or with a completely systematized compliance office.

Evicertia is a tool that generates evidence of companies' certification, contracts & agreements, copies and conformities. Standard certifications of insurance companies are: insurance hiring, communications regarding losses, documentation deliveries, etc.
